

Strap Extender

Quick Setup Guide

OVERVIEW

The StressVest® Strap Extender is designed to add additional length to the waste strapping on the StressVest®. This allows for the StressVest® to fit larger students or to allow for role players to wear the StressVest® over protective equipment.

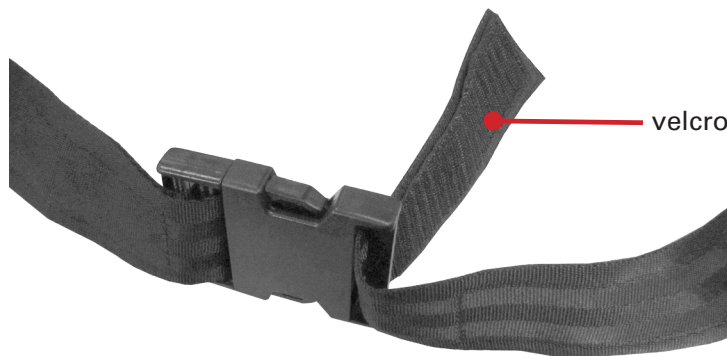

INSTALLATION

- 1 Detached the Strap Adjustment Buckle on both sides of the Vest Shell.

- 2 Attach the StressVest Strap Extender by simply pushing the male piece into the female portion of the buckle.

- 3 The strapping is secured by velcro back onto itself. Release the velcro, adjust to the desired length and reattach the velcro.
